Hi Bing,

It was good to talk about the courses. This fits very well with my expertise, and I'm excited to develop work for this audience.

I would recommend 10-12 weeks for the Level 2 curriculum, with a 2-hour session each week. I would create a Google Colab Notebook each week for the students to have available to look at ahead of time if they choose and use as notes and a permanent record of the material. Then during the session, I would present how to work through the material / code in the notebook for the students; answer questions about the notebook; and then if time permits, encourage students to develop their own variations on the code that they could save as their own deliverables which could gradually become a small portfolio.

Does this match with what you want for the teaching?

Dan

Morning,

Since we're heading into the weekend, let's target the call for **Monday, December 29th**. I am fully available all day that day.

Please let me know which time slot works best for both of you to connect for a quick discussion.

Best regards,
Bing

Hutson, James <JHutson@lindenwood.edu> 2025 12 27 10:30

I'm free for a quick call anytime today otherwise we'll need to push it to Monday for Dan schedule.

No problem at all. I'm available tomorrow and the morning after tomorrow.
Please let me know which time works best for you, and I'll be happy to coordinate the video meeting.

Hutson, James <JHutson@lindenwood.edu> 2025 12 26 1:50

Bing, let's all meet together to iron this out. There is some confusion over timing, when the classes will be offered and/or overlap, etc.

When do you have time to set up a video conference with the three of us?

Bing,

I will look at my schedule, but already teach many nights already.

I'm including my colleague who would actually be better suited in many ways to teach the classes, Dr. Dan Plate. He works with me as a co-researcher and AI teacher/mentor.

Let's see if he would like to work with this population with the attached syllabus.

Hi James,

Thanks for raising these points. For this round, we'll be running small classes of about 5–6 students, so the two-hour sessions should allow for plenty of interaction, including guided discussion and instructor-led participation rather than just lecture/demo.

This cohort will be primarily focused on North American native English-speaking students, so we're open to scheduling the sessions on weekday evenings rather than optimizing for a global time zone this time.

Let me know if that helps address your concerns, or if you'd like to suggest a time window that works best on your end.

Best,

Bing

Hutson, James <JHutson@lindenwood.edu> 2025 12 22 10:42

Bing,

How would you like the two-hour sessions to be organized? If this will be set up like the other sessions, students wouldn't be able to share their screens or talk. Are you wanting something like a lecture and demo each time. I'm trying to think how to fill the time, because setting these up and doing coding goes really fast.

Aside from that, I think I'll be able to handle it; the only concern would be the time. I know we went with 8pm EST to accomodate the international audience. Are we aiming for the same audience?

Hi James,

Thanks for these thoughtful questions — happy to clarify.

1. Dates & times

The specific dates and times are not fixed yet. We're very open to adjusting the schedule based on your availability and what works best for you.

2. Course sequence & structure

The courses will run sequentially, starting with Level 1, followed by Level 2.

Within each level, we plan to split students into two groups (G7–8 and G9–11), as the depth and rigor of the content will differ between these age groups.

To move from Level 1 to Level 2, we will design a formal assessment to ensure students are ready for the next stage.

3. Instructional expectations & platform

We will use Google Classroom to distribute and collect all materials, assignments, datasets, and related resources.

All operational support (classroom setup, student management, materials distribution, etc.) will be handled on our end, so you can focus primarily on instruction and in-class guidance.

Best,
Bing

Hutson, James <JHutson@lindenwood.edu> 2025 12 22 10:16
Bing,

Thank you for your message. A few questions:

What would be the days/times?

Would these run concurrently (i.e. Levels 1-2b going at the same time) or build starting with Level 1, then when that ends, move to Level 2, etc.?

What are the expectations on my part with regards to instruction? Will they have access to a learning platform with these materials and instructions already set up, or would I send them homework each week and then we discuss and troubleshoot on the day, or another arrangement?

Level 1 and Level 2a would be fairly easy to do without an LMS, but Level 2b would require at least Sharepoint or Google landing for the instructions, videos, datasets, etc.

Thoughts?

Hi James,

I hope you're having a great weekend, and wish you a great holiday.

I'm happy to let you know that we are officially kicking off the **AI Youth Research Series!**

We have started the enrollment process and finalized the content for the first two levels.

I have attached the syllabus for Level 1 and Level 2 for you to take a look at. We are planning for small classes of 5-6 students, with each session running for 2 hours.

Regarding the rates, we can offer **\$150/session for Level 1** and **\$200/session for Level 2**.

We would love to have you lead these courses. Do you have time this Spring to take these on?
Let me know your thoughts!
Best,
Bing
