Dear Dr. Plate,

I hope you've been doing well.

As we've been speaking with parents about the Level 2 course, a few of them have asked for more clarity around the coding component of the curriculum. In particular, they're curious about what kind of programming background students would need and which programming language(s) will be involved.

Would you mind sharing a bit more detail on:

- What programming language(s) students are expected to use, and
- Whether prior coding experience is required, or if the necessary skills will be introduced within the course?

This would be very helpful for us in setting expectations clearly for families.

Thank you so much, and we really appreciate your time.

Best regards,

Bing
